

Immediate notification of troubles that occur in the production line Production process support software for WCL series V2.02

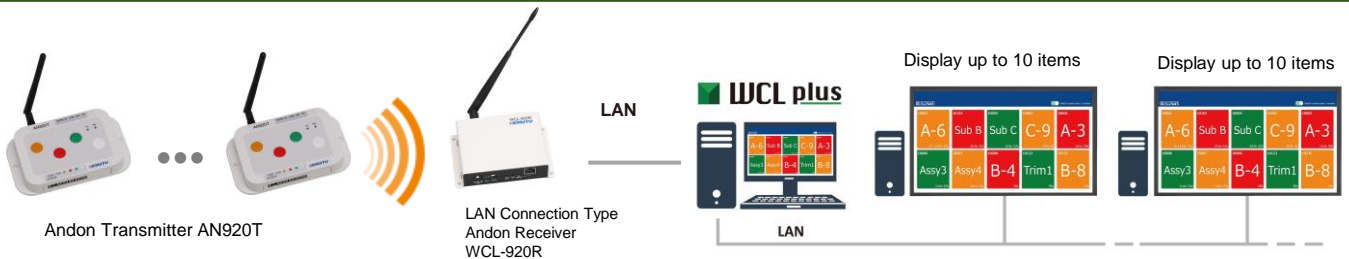

NEW

WCL plus

This is a Windows application that can be used in combination with the wireless Andon system AN920 series for customers considering the following: "I want to immediately respond to problems that occur in the production line" and "I want to analyze the history of troubles that occurred in the production line".

The status of calls from the workers and machines in the production line is displayed on the computer screen and LCD monitors.

- Wirelessly communicate with up to 800 transmitters

- Within one factory, up to 10 WCL-920R can coexist

- Gathering of reports of trouble occurrences from up to 8,000 locations

Input signals from manufacturing equipment and PLCs are displayed on the computer screen. I/O signals can be controlled with a simple UI.

Saving the history of trouble that occurred.

Saved Data (CSV Format)

- Raw data
